

Milestone Systems

XProtect® Enterprise

The Open Platform Company

Feature rich software for powerful surveillance

Milestone XProtect Enterprise is advanced open platform IP video management software (VMS) for medium and large-scale installations. It provides operators with an effective way to manage the entire surveillance system, including viewing an unlimited number of cameras*, controlling access points and creating evidence.

XProtect Enterprise has configuration wizards and automatic hardware detection, which significantly reduce the time and cost of installing large systems. With multi-layered and interactive maps, the software provides situational awareness

of multi-site installations. Ideal for daily users and operators who want sophisticated live monitoring, XProtect Enterprise has efficient alarm handling and unique camera navigation to track moving objects.

XProtect Enterprise also supports endless integration possibilities, allowing users to add customized functionality to create a unique security solution.

*For most installations larger than 250 cameras, Milestone recommends using our premium product XProtect® Corporate

Easy to deploy and operate large, multi-site installations

Live view

XProtect Enterprise has many helpful features that simplify the process of deploying large, multi-site installations, such as an automatic installer that enables a faster installation process. Installation is further simplified with smart bulk configuration, which allows multiple cameras to easily be set up with similar settings, saving time in installations with many cameras. With support for the free utility Software Manager, users can simply and quickly deploy and upgrade XProtect Enterprise from a single application, significantly reducing the time needed to maintain large installations.

XProtect Enterprise is powered by XProtect® Smart Client, the daily operator interface that gives instant access to live and recorded video. Available in 26 languages, XProtect Smart Client has a wide array of advanced features that make it easy to intuitively operate your system, view video, respond to alarms, investigate incidents and handle evidence.

Keep operations running smoothly with System Watch, a free utility that alerts security operators when there is a system failure. Receive immediate notification from an input/output device, such as a alarm, when there is hard drive, recording server or camera failure, offering an additional level of reliability.

Advanced software delivering ultimate usability with powerful tools such as:

Export or import system and user configuration data for backups or multi-site cloning

Automatic system restoration points enable users to cancel undesired changes and easily revert to previous configurations

Archive on event allows the video archive process to be triggered based on a time schedule or an event

Privacy masking lets parts of an image be concealed in live, playback and exported video to prevent them from being viewed

Long-term video storage is cost-effective with dynamic archiving that saves valuable disk space by storing short-term video on fast, local disks while historical data is moved to less expensive, networked disk systems

Dual streaming, with two independent configurable video streams, allows for remote viewing of a video at a lower resolution and high-quality video for live recording

Advanced alert handling allows recordings to be triggered by events or motion detection and emails or SMS notifications are sent about the incident

Advanced live monitoring solution

Get an overview of the entire installation with three innovative features that provide situational awareness to help visually verify incidents and maintain complete control

Map

Interactive, multi-layered maps provide a comprehensive overview of an entire surveillance installation, allowing for quick detection of trouble areas.

Components such as cameras, speakers and input/output devices can be overlaid on any image of an installation giving an outstanding visual overview. Maps also improve response time with instant notification of security breaches and real-time status of system devices.

Alarm Manager

The Alarm Manager consolidates alarms from all connected security devices and systems for immediate visual verification, helping decrease the number of false alarms.

A prioritized alarm list gives an overview of active alarms and their severity. System alarms can be set up to immediately detect system problems such as malfunctioning cameras, storage servers and other components.

Camera Navigator

The Camera Navigator collects camera locations, camera names and view areas, making surveillance locations easy to navigate.

Moving objects are easily tracked because the views of cameras nearby the camera in the current view are automatically displayed on the screen.

The Milestone Open Platform

A foundation for long-term success

Milestone's XProtect open platform video management software (VMS) integrates with the industry's widest choice in cameras, giving you the freedom to choose equipment according to your needs and budget. Committed to providing a true IP video open platform and freedom of choice, Milestone is proud to be among the first VMS vendors to support and lead the future progress of ONVIF and PSIA standards.

Integrate applications and systems into XProtect VMS with the Milestone Integration Platform Software Development Kit (MIP SDK). The open architecture of XProtect, together with the MIP SDK, allows for endless possibilities to add features and functionality for creating powerful, custom surveillance solutions.

About Milestone Systems

Founded in 1998, Milestone Systems is the global industry leader in open platform IP video management software. The XProtect platform delivers powerful surveillance that is easy to manage, reliable and proven in thousands of customer installations around the world. With support for the widest choice in network hardware and integration with other systems, XProtect provides best-in-class solutions to video enable organizations – managing risks, protecting people and assets, optimizing processes and reducing costs. Milestone software is sold through authorized and certified partners. For more information, visit: www.milestonesys.com
