XProtect® Professional

The Open Platform Company

Helping you do more

Complete surveillance for mid-sized installations

XProtect Professional is comprehensive open platform IP video management software (VMS) for mid-sized installations. It supports up to five servers and up to 64 cameras per server. XProtect Professional is ideal for single-site installations with multiple buildings that have a need for live monitoring.

Simple video search tools and flexible ways for users to access and view video from the system provide an efficient way

to manage video and swiftly find and export video evidence. With supporting utilities like System Watch, XProtect Professional offers extended safety for the security administrator with live system failure notifications.

Users can also integrate various third-party security and business systems, as well as video analytics applications, to expand the functionality of the system.

Live monitoring made easy

XProtect Professional is powered by the user-friendly XProtect® Smart Client, a unified operator interface available in 26 languages that is adaptable for users of different skill levels. XProtect Smart Client makes it easy to effectively monitor security installations and export evidence.

Users can maintain a live view of an installation while examining incidents with independent playback, a capability that allows for instant playback of recorded video while in live or playback mode. Additionally, the multi-channel, two-way audio feature makes it easy for operators to actively monitor installations because they can communicate with people at gates/entrances or broadcast messages to many people at once.

Security operators can ensure the system is performing optimally with System Watch, a free add-on utility that displays live system failure notifications relating to the hard drive, recording servers and cameras.

Live view

Smart Search

To quickly locate recordings of incidents, XProtect Smart Client has unique video search tools such as Smart Search and the Sequence Explorer. Smart Search lets users search for motion in one or more selected areas of images from a particular camera.

To help collect evidence quickly, the Sequence Explorer displays a visual overview of captured video and time intervals from one or more cameras as drag-and-throw image thumbnails. Creating evidence is further simplified because you can export video in various formats, including video from multiple cameras with user notes included.

Perfect for campuses with multiple buildings at a single site, XProtect Professional has advanced features that include:

Simplified installer automatically gathers all necessary system information, helping reduce installation time and errors

System configuration wizards guide the user through the process of adding cameras, configuring video and recording, adjusting motion detection and configuring users

Smart bulk configuration allows for easy setup of multiple cameras with similar settings

Optimize existing hardware

XProtect Professional's master/slave configuration supports up to five servers. With multiple servers it is easy to expand an installation and add more cameras and hardware and increase the overall performance of the system.

Multiple servers

Motion detection

Performance-enhanced, built-in motion detection lowers memory and central processing unit (CPU) consumption even when additional cameras are added. Hardware is optimized by detecting motion on key frames or on a specific part of the video in regular quality or lower video resolution.

Hardware is optimized with two independent, configurable video streams for live and recorded viewing, allowing clients, servers and network infrastructure to be used to their full capacity. Each stream can be individually optimized for stream compression, resolution and frame rate.

Dual streaming

Privacy masking enables users to conceal areas in the camera view that must not be visible or recorded. It can be defined for individual cameras and is applied to live, playback and exported video

Integrate applications and third-party security systems, such as analytics and access control, directly into the software, making it easy to manage the entire installation through one unified interface

System alarms help ensure immediate detection of problems with cameras, storage servers and other components

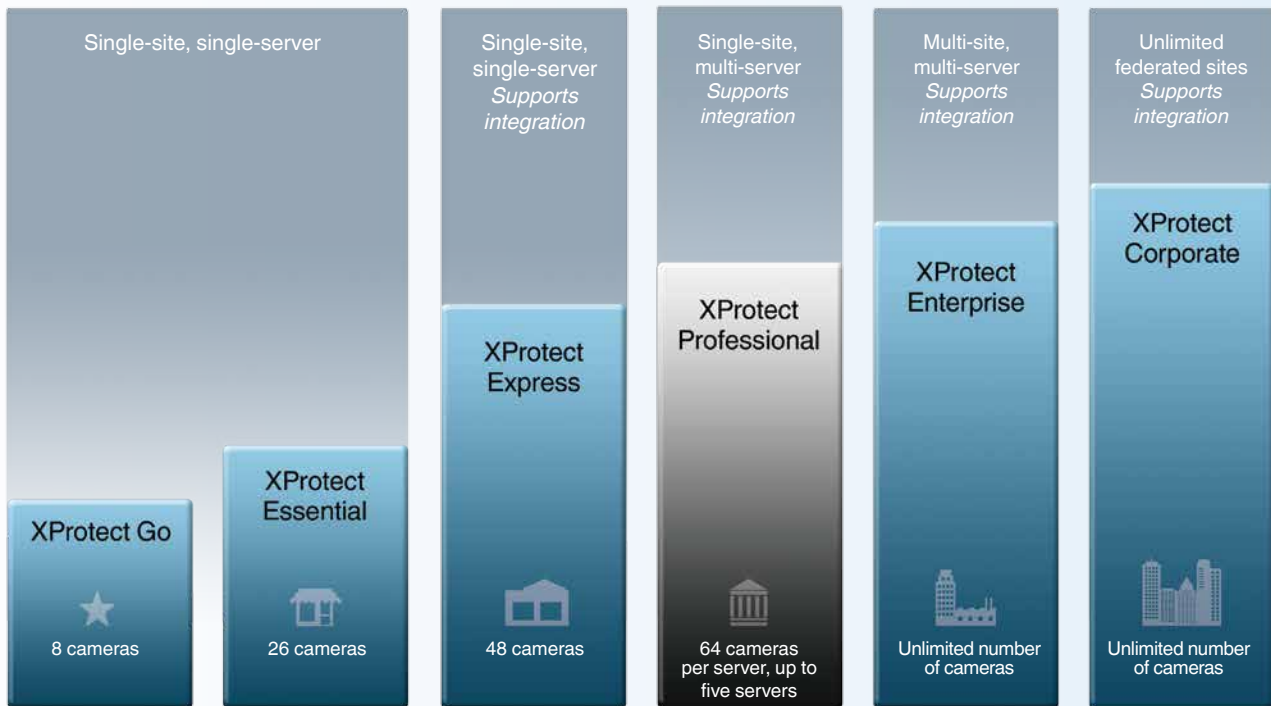

Advanced alert handling allows users to activate re-recording by events or motion detection triggered by the system or cameras

The Milestone Open Platform

A foundation for long-term success

Milestone's XProtect open platform video management software (VMS) integrates with the industry's widest choice in cameras, giving you the freedom to choose equipment according to your needs and budget. Committed to providing a true IP video open platform and freedom of choice, Milestone is proud to be among the first VMS vendors to support and lead the future progress of ONVIF and PSIA standards.

Integrate applications and systems into XProtect VMS with the Milestone Integration Platform Software Development Kit (MIP SDK). The open architecture of XProtect, together with the MIP SDK, allows for endless possibilities to add features and functionality for creating powerful, custom surveillance solutions.

About Milestone Systems

Founded in 1998, Milestone Systems is the global industry leader in open platform IP video management software. The XProtect platform delivers powerful surveillance that is easy to manage, reliable and proven in thousands of customer installations around the world. With support for the widest choice in network hardware and integration with other systems, XProtect provides best-in-class solutions to video enable organizations – managing risks, protecting people and assets, optimizing processes and reducing costs. Milestone software is sold through authorized and certified partners. For more information, visit: www.milestonesys.com
